#	Type	Topic	Topic details	Flags	Responsible for next step	Priority (if applicable: Due Date)
---	------	-------	---------------	-------	---------------------------	------------------------------------

Maybe we make a separte section for top issues and have the topic be one per column, top issues can be automatically extracted by having a quick flag not just status; - so status is a preselect, so is top issue or not and status can become flag;

There needs to be predefined options that are easy to choose based on her existing work- I will build the db for those but also have to have an input in case something custome is needed; for now we will build the predefined ones and deal with new tipes after this one is configured ok; but note that we have to check that as well;

Auto-numbering	Predifined types, actions seems to be the most used but there needs to be an option to integrate custome tyoes as well as predefined lists	Insert yourself but also suggestions based on other previously used one from yout files...or autocomplete suggestions Topic will vary wildly according to project needs	Need a button to insert date or auto/inserted - The bullets are the actual information they seem to be 16.03.2026 - EOS DB SPOC has been involved and we are waiting on an update this week 09.03.2026 - Christian to send alert about not having anymore space on FMX - Currently there is a conversion happening: how can this run ful over weekend without input from team - Sudhir to investigate	Predifined flags and option to expand flags section
----------------	--	---	--	---

#	Type	Topic	Topic details	Status	Responsible for next step	Priority (if applicable: Due Date)
1	Action	Top Issues 0451 - WFD/HMD/HMQ/HMP/JAP Expiration: 15th of April 2026 0473 - FMX Part I : Missing Authorization check in SAP NetWeaver Application Server for ABAP : Update Kernel Expiration: 18th August 0474 - FMS,FMD,FMQ,FMP,FMX Part II: Missing Authorization check in SAP NetWeaver Application Server for ABAP : Parameter settings Expiration: 18th August	0473 only applicable for FMX 0474 - raised SRs for FMD and FMQ 17.03.2026 - Volume migration FMP plus 0474 - 22nd or March 2 new top issues - Both for same issue - RFC related - Update kernel to latest - Japneet investigating if kernel needs updating - Sudhir - Update parameters - restart needed (rfc/authCheckInPlayback = 2) - Palash investigating and keeping us posted - HMP - OK for the 22nd of March - Everything on track 09.02.2026 - HMD and WFD - everything is done, so 0451 is completed - HMP SR - to be raised for the OS patching today and for Volume migration to be raised in March 0406 - completed successfully on the 25th of Jan 0451 - HMD and WFD scheduled for 7th of Feb - HMQ for 15th of Feb - patching and volume migration - HMP 22nd of March - OS patching + volume migration - To be done in Month of March - On track - On track - New top issue to be resolved January 2026 25th of Jan scheduled - WFP and WFB - SR needed: select time slot after 1 PM CET on the 25th ...	In Progress		
2	Action	Profile Parameters	- Any update from Allianz on the topic - Possible to set for FMP same as FMQ (ECS standards) - after monthly closing to look into it - Restart required for parameters - looking at month of April (early April) - End of month review 02.02.2026 - In progress - let's review at the end of the month - Feb - In progress - In progress on Allianz side - Memory - extraction failing in FMQ - Memory parameters SAPCase # 996781 - solution proposed - Is the solution pertinent for our scenario? - Purpose: extraction failing in FMQ - solution is valid for both Q and P - needs validation from Allianz and see if it solves the issue - In progress - to check with Christian when back - In progress on Allianz side - Memory parameters SAPCase # 996781 - solution proposed - Allianz to check - Christian to check and get back to us - All parameters maintained back to ECS standard. - Memory parameters SAPCase # 996781, work in progress - Christian feedback on profile parameters - Sap user scripting remains true (right now it is set dynamically) Christian to create a new SR to correct this and have the script be set to true and not dynamic. - Parameters have been changed, Christian to update on efficiency/applicability - For FMQ parameters should be set and for Sunday, SR to be created by Christian for Prod and can be done during maintenance window on Sunday - Extension done for sapgui/user_scripting Tobias: already tested with some customers and looked good, preparing for new authorizations in prod, set parameter Christians: create SR to be set statically for FMQ and maybe FMP to be ste dinamically - e-mail needed from Tobias or Christian to confirm - For sapgui/user_scripting - The security team has agreed to extend until November	In progress	Allianz/SAP	
3	Action	Security Notes Implementation <i>Former topic: CQC Service Activation Pre-requisites</i>	- Waiting on Benjamin for exact audit requirements for different types of SLAs - Once that is done SAP to provide plan - Palash to share SLAs with Yeswanth - yes to come back with proposal - Allianz: does the approval need to be provided now? What is the process? - Check with Yeswanth about the swap option for CAS - Tuesday 3/3/2026 - transports moved to QA system - Review and approval needed for Prod movement - Note:3674774: 9.6 (Immediately to be implemented and Allianz Basis implemented this) - SR33551172: Status Service Provided: implemented on some systems but not on all - Who is responsible for these types of Notes? - SAP or Allianz? - SAP is responsible - Allianz: when would have this been done? - SAP: by the end of the month: SAP team does an analysis on a monthly basis and then implements them by the end of the month - Currently Security notes package includes the analysis	In Progress	Allianz/SAP	

			and monthly basis implementation independent of CVSS • Allianz to discuss with Basis colleagues and get back to SAP • <u>Alignment needed on the topic: Meeting to be scheduled</u> • Central Topic question: was there a timeline given for a permanent solution regarding Realtek? • For Allianz the solution that is current applicable can be considered permanent (Realtek is working on a solution that can be rolled out to other customers as well. When that is done, Allianz will switch over to that one as well) • Realtek to provide a better solution long-term but currently solution implemented by Christian is sufficient • Team Implemented all high-security notes from May-2025. Now team is working in low-priority notes from Ma-2025 • Team is asked to maintain the SAP For Me ticket number in TR Description. • Feedback from Yesh - status on the lower priority notes • High priority notes have been implemented • Status of lower priority notes: Oana to check with Yes • Allianz was wondering why Security notes were not implemented for such a long time? • Not the implementation necessarily, the impression was that the system was still running and should SAP not implement it the Basis colleagues were supposed to do it • No checks being done from SAP side during the entire time • Implementation done on Wednesday last • Update from Yeshwanth • Yesh to look into the slots and propose a time for a sync • Changes made during session - this was a temporary fix - permanent fix suggested? • Realtek to provide a better solution long-term but currently solution implemented by Christian is sufficient • Repa change made by Christian but only active for 000 - cross client coding change • Method skips 000 client for auth check • Next step: meeting about the doc and principles are to release the transports to production - CAS team meeting needed - Oana to contact Yesh • Meeting with Realtek planned. Timelines proposed by Yesh. • 3-Dec: 10:00 AM CET • 4-Dec: 10:00 AM CET • 4-Dec: 04:00 PM CET • Christian described issues to Realtek and they were send the info by Dietmar. Seems to be no way around without Realtek authorization (assumption, waiting to get Realtek feedback) • In progress - Central meeting is bi-weekly • Oana raised this topic in the Central topic last week and Juan is following up on it • Christian to work on a step by step and document situation and then follow-up with • Best follow-up: a test done together and at the same time			
4		Performance analysis - FMP RCA Case # 1240521	• Christian waiting on some details • Details to be send to Japneet • In progress on Allianz side • In progress on SAP side - update next week • Christian to share details with Shruti • Update by 13th of Feb • Some transactions ran longer than expected: Christian to share the details with Shruti and Japneet • In Progress • Wait for implementation in FMP and monitor the sys for 1 week and see if any issues pop up because of parameter change • 25th of Jan - sys monitor to start for two weeks to incorporate the monthly closing starting with Jan 29th • Confirmed and done with the patching window . • 3 tickets created in customer action • SAP to check and update if another SR is needed • Palash: Q. if hana base upgrade - parameter the same (Shruti: YES) • Go ahead with the change after the holidays in next maintenance window • Palash: adding this topic into the SR • SR needed - Shruti looking into this • Allianz to review and confirm path forward • Palash or Biru - to check into parameter • DB team suggested to tune parameter default_statement_concurrency_limit. • Current value is 51, which means 51 parallel CPU threads will be used by single DB request. For OLTP workloads, suggested value is max(4, roundup(0.20 * cpu_threads, 0)) in ECS which is 25 for 128 CPU configuration. • Please review SAPNote# 2600030	In Progress	Allianz/SAP	
4		Conversion updates	• Update? • Waiting for feedback on incident opened • In progress • In progress on Felix side • Need to find expertise closer to DE time • Ongoing - some issues to be discussed with providers but moving along • Informed Naveen regarding planned FMX/HMX Patching. No impact, proper downtime planning needed. • PL assigned, followup meetings set. • Allianz good to go - just check with Business Function • Naveen has taken the lead in getting a PL by today evening or tomorrow • PO solution proposed: With a different customer we solved this by having ECS send an email to the customer after the commissioning via SAP 4 me, requesting confirmation. • Meetings on Monday • Confirm with customer if they received the reply. • Reply received - to be followed up with approval • Once approved SAP will start the process and set up some meeting for moving forward with the execution • do you have a cutover plan for the S4-conversion process you are able to share with us? • SR to be raised by Allianz 15th or 16th of Dec • Check the lead time for SR for the technical conversion • Lead time: 3 weeks before conversion starts • Conversion set to 19th of Jan 2026. SR to be created at the beginning of January 2026 by Allianz • After discussion with Octavian from SAP, pricing is understood. Conversion most likely planned for next year 2026. • Allianz to confirm dates. • Technical Conversion meeting took place on the 6th of Nov and details were provide, checking with Tobias for next steps • For the below services, these are support packages and we have SRs for them: SR name Update application Software - Not Billable - BASIC_1.5.09 • the customer needs to communicate what they want to patch and it will be delivered with this template. If it will be a bigger upgrade from one S4 version to another then it will be the SR name: Upgrade Application Software • Oana to check details regarding technical conversion • Oana to check : Upgrade for Add on implementation - who is responsible for upgrade - paid or not? • In progress: Oana to set up meetings: Roman (simplification items) and Susanne + Markus	In-Progress	SAP	
5		CAS ticket Total: 72 Used: 5	• 15.12.2025 • Tickets reset yearly: 31.05.2026 • 27.10.2025 • Task is completed - Yeswanth provided the needed reply • 13.10.2025 • Ops tickets - how will the tickets get processed internally by SAP • How many remain to be used - add in this section			
8		Patching	• No OS patching for month of March • SRs can be submitted for March patching • Volume migration SR to be submitted along with OS patching - Palash • All patches up to date for FMP and FMS for Feb month . SR's to be cancelled • FMP done on the 25th of Jan • FMS - 30th of Jan • HMD and WFD scheduled for 7th of Feb - - patching and volume migration • HMQ for 15th of Feb - patching and volume migration • HMP 22nd of Feb (PROD) - Only Linux patching • In progress • Scheduled: • FMP - 25th of Jan • FMS - 30th of Jan • SAP rescheduled everything • Anything planned on Allianz side for upcoming weeks? - no			

			• FMD - Sat 4 AM to 12 CET (Oana to update DED) • DEV and QA are ok • 2 different SRs: 1 bundled for patching and database and 2nd SR for application client upgrade • Application SR • Hana client application SR - standard single SR • Prod and FMS • Incorrect schedule for SR and bundled SR - was supposed to be submitted at a different time • Mitigation: change the timing (inquiry on SAP side - to be updated if this can be done) ▪ If not possible: then creation of 3 SRs needed ▪ Action: Shruti or Japneet to confirm by EOD today/tomorrow morning if a new creation is needed ▪ Action: Palash also to confirm with Christian if the existing timing works • In progress • FMD & FMO on one weekend - Shruti can assist • Activities that need to be done - to be defined and see if this can be done manually or scheduled • 17-18th and 25th for PROD • Can FMD be moved to the weekend?			
		Table Memory Consumption	23.02.2026 • Action: Currently ignore the alerts - if any issues due to alerts adjust 16.02.2026 • Any other details needed on Allianz side? 09.02.2026 • A memory allocation limit for FMX tenant of 512 GB is configured to control usage with actual physical memory for the HMX system being ~2TB (Global Allocation Limit). • When memory consumption reaches 85-90% of this limit, High Memory Usage alerts are triggered, which explains the alerts observed. • Q: should the alert threshold be changed? • Q: what is the sys usage for FMX after conversion ▪ After conversion FMX will be used for a short time ▪ Action: Currently ignore the alerts - if any issues due to alerts adjust 02.02.2026 • Details needed - RAM getting consumed • Shruti will investigate - conversion impact non probable			
		Update on the PCA (Post Copy Automation) option	09.03.2026 • Christian got back to Zoltan - want sys to be ready by 1st April • No need to PCA, Allianz to do the cleanup • This topic be closed 09.02.2026 • There was a request to move forward with this, is this still the case? • FME system - the later Allianz sets up the better, no need to FME until the actual conversion • Christina will get back to Zoltan - this is not priority			
		Evidence	• In progress • additional evidence to our auditors regarding our controls on Regression, Performance and/or E2E Tests.			
		FMPAZZ Enqueue Replication Server in red status	• RCA was send today • Palas raised SRs to raise parameters - TO be completed 22nd of March • RCA completed - official mail might take a while due to internal tool issue • High rate of lock requests was sent to the enqueue server within a short period of time. This resulted in the enqueue server becoming overloaded and exhausting the available memory blocks at the ERS level to prevent similar incidents, the values of the enqueue memory parameters should be increased(KBA 2903167) : • Analysis done for Enqueue replication server. To change the parameter SR to be raised to change the parameter explicitly for ASCS instance • To update if system restart required ? - Yes System restart required(details mentioned in KBA) . • In progress on SAP side • SAP internal team preparing RCA, actions to be taken after RCA • Japneet shared initial analysis			
		Monthly PCE meeting	16.03.2026 • More time needed as there are 3 system: OS level is triggering 09.03.2026 • Update week of 23rd of March 02.03.2026 • TSM investigating on our end • To check timeline measurement - is this a month end peak or happening during the entire month? • Note: no alerts in PROD or other alerts • During peak: already having the memory parameter that we discussed ▪ Once duration: to discuss further and investigate ▪ Entire month - light blue average usage for the month and dark blue the peaks ▪ Internal ticket to server management team to analyze it			
		FMX running full	16.03.2026 • EOS DB SPOC has been involved and we are waiting on an update this week 09.03.2026 • Christian to send alert about not having anymore space on FMX • Currently there is a conversion happening: how can this run full over weekend without input from team • Sudhir to investigate			

Patching Details:

1. Customer to open SR for Patching/Kernel updates, downtime to be selected as per slots available in the SR in the SAP4Me portal.
2. As of now, there is no integration between SAP4Me and SR to automatically select CMP for SAP systems. SRs to be submitted manually for the systems.
3. CAS team will identify and notify the customer on the security patches. Customer to create SR for implementing the fixes for the respective teams. (ECS in case of infrastructure) .
4. CAS team will implement offline changes related to respective CAS packages but the changes which require downtime have to requested via SR. CAS team to inform customer on such changes. SR to be submitted by the customer.
5. CMP to be used by SAP to apply offline changes and any emergency maintenance.
